What is claimed is:

1. A terminal apparatus comprising:

    a session opening request section that requests the

5 opening of a session with a specified terminal apparatus;

    a reservation process setting request section that

requests the setting of a reservation process executed

when the opened session is changed; and

    a session closing request section that requests the

10 closing of the opened session.

2. The terminal apparatus according to claim 1, further

comprising a session hierarchical operation request

section that requests a change operation of a hierarchical

15 relationship among a plurality of opened sessions.

3. The terminal apparatus according to claim 2, wherein

said hierarchical relationship is specified by a session

ID assigned to each session.

20

4. A terminal apparatus comprising:

    a session opening request reception section that

receives a session opening request requesting the opening

of a session with a specified terminal apparatus;

25   a session opening section that opens a session with

a specified terminal apparatus according to the received

session opening request;

    a session closing request reception section that

receives a session closing request according to a reservation process executed when the opened session is changed; and

a session closing section that closes the opened
5   session according to the received session closing request.

5. A session control apparatus comprising:

a session opening request reception section that receives a session opening request requesting the opening
10   of a session with a specified terminal apparatus;

a reservation process setting request reception section that receives a reservation process setting request requesting the setting of a reservation process executed when the opened session is changed;

15   a session closing request reception section that receives a first session closing request requesting the closing of the opened session;

a hierarchy setting section that sets a hierarchal relationship among a plurality of opened sessions
20   according to the received session opening request;

a hierarchy update section that updates the set hierarchal relationship according to the received first session closing request;

a reservation process setting section that sets a
25   reservation process executed when the opened session is changed, according to the received reservation process setting request;

a reservation process execution section that

executes the set reservation process according to the received first session closing request; and

a session closing request transmission section that transmits a second session closing request requesting the closing of a session with the specified terminal apparatus according to the closing of the reservation process executed.

6. The session control apparatus according to claim 5, further comprising:

a session hierarchical operation request reception section that receives a session hierarchical operation request requesting a change operation on a hierarchical relationship among a plurality of opened sessions; and

a hierarchy change section that changes a hierarchical relationship according to the received session hierarchical operation request.
